

Data Sheet

KEY BENEFITS

REDUCE RISK OF SHOPPING CART ABANDONMENT

Statistics show over 41% of users utilize the shopping cart for research related to shipping charges. Many then leave the site without making a purchase due to inconvenience or cost. Calculating shipping charges right from the item page eliminates this problem and makes the shopping experience easier for your customers.

BUILD BRAND LOYALTY

In the long-run, your customers appreciate the user-friendly set-up of Item Page Shipping Calculator, giving them an incentive to return for future visits. Customer loyalty not only guarantees return shoppers, but also builds a positive brand identity for your site leading to new visitors.

ADDITIONAL FEATURES

- UPS Rate calculations based on either published or negotiated rates.
- Fed-Ex Rate calculations based on either published or negotiated rates.
- Handling or other uplift charges can be added to the amount returned from the carrier. These add-on amounts can be defined as a dollar amount, a percentage or both.
- Handling charges by Shipping Method so that Handling charges for specific shipping methods (i.e. \$10 handling fee for Over night Shipments) can be added.
- Supports a custom developed procedure so that additional shipping scenarios can be supported. This procedure can be used to support dollar based shipping charges, oversized packages, or other unique shipping environments. The module simply supports the ability to include the procedure. The actual procedure must be designed and custom developed based on your requirements. color, etc)

The Shipping Rate eInterface module will provide an automatic calculation of freight amounts for an order. The Shipping Calculator can be linked to provide UPS, Fed-Ex or USPS rates based on the weight of the products being ordered. Shipping Rates can be uplifted to include additional charges or markups to cover over pack, etc. This module is only required if you have a Consumer Site with buying options in place. It is optional for all other sites.

Main Features

The Shipping Rate eInterface module gives the ability for the webstore to calculate the appropriate freight charges for an order using a real-time interface to UPS, Fed-Ex or USPS web services. When this module is present, the Estimate Shipping option is shown during the checkout.
